SOURCE ID: 21-195-00234

AGENCY INTEREST: 3673

ACTIVITY: APE20080002

**SOURCE DESCRIPTION:**

On October 10, 2008 Kellogg USA, Inc. (Kellogg) submitted an application for an initial conditional major operating permit for Kellogg's Snacks in Kemper, KY. Additional information was received on November 13, 2008 and the application was considered complete on November 17, 2008. The facility produces baked goods intended for human consumption. Potential emissions of VOC from the facility exceed 100 tons per year. Kellogg is proposing a 90 ton per year limit on VOC emissions to preclude applicability of the Title V program [401 KAR 52:020]. Kellogg's Snacks operates three natural gas direct-fired ovens for the production of baked goods. Other equipment at the facility includes indirect heat exchangers (rated between 0.35 and 1.44 MMBtu/hr), use bins and silos.

**PUBLIC AND U.S. EPA REVIEW:**

On January 30, 2009, the public notice on availability of the draft permit and supporting material for comments by persons affected by the plant was published in *Appalachian News-Express* in Pikeville, Kentucky. In addition, notification of the issuance of the draft permit was sent to the U.S. EPA on February 4, 2009 via e-mail. The public comment period expired 30 days from the date of publication.

Comments were received electronically from Kellogg's Snacks on March 5, 2009. The Comments and Response attachment lists the comments received, the Division's response to each comment, and a detailed explanation of the changes made to the permit. Minor changes were made to the permit as a result of the comments received; however, in no case were any emissions standards, or any monitoring, recordkeeping or reporting requirements relaxed.
